^[1] Center Wavelength can be customized.

^[2] Test at room temperature without connectors. With connectors, IL+0.3dB, PER-2dB, RL-5dB.

^[3] Test at center wavelength.

^[4] When test RL, coil all other port fibers 3-5 turns around a 10-30mm diameter loop, this prevents back reflections into test port, which would significantly lower RL.

^[5] $CR = 10 * \log_{10} (P_{port \lambda 1} / P_{port \lambda 2})$, P=power in mW, test wavelength can be either wavelength of the two,

^[6] Max power is for total power of longer wavelength+shorter wavelength. Higher power available on request.
